1. Introduction. X-ray computed tomography (CT) is becoming increasingly important among the non-destructive inspection techniques for applications where the three-dimensional (3D) nature of the phenomena is important, or where the evolution of critical features is of interest, either during manufacturing or under in-service conditions.

Electrospinning is a process by which polymer nanofibers (with diameter lower than 100 nm and lengths up to kilometres) can be produced using an electrostatically driven jet of polymer solution (or polymer melt).

1. Introduction. Nanocomposites are composites in which at least one of the phases shows dimensions in the nanometre range (1 nm = 10⁻⁹ m) 1.Nanocomposite materials have emerged as suitable alternatives to overcome limitations of microcomposites and monolithics, while posing preparation challenges related to the control of elemental composition and stoichiometry in the nanocluster phase.
