Directed Mutagenesis is defined as the change in amino acid coding at the DNA level. A characterized 3D structure of the protein using X Ray crystallography and other analytical procedures helps in determining which amino acids of protein should be changed to attain specific property.

Book : Directed mutagenesis: a practical approach. 1991 pp.xx + 257pp. Abstract : A multi-author volume which provides information on experimental design and protocols for mutagenesis experiments.

Directed mutagenesis: a practical approach.

The principle of site-directed mutagenesis is that a mismatched oligonucleotide is extended, incorporating the "mutation" into a strand of DNA that can be cloned. In this lecture, I will present a number of current methods in use.

Bio572: Site-Directed Mutagenesis

Site-directed Mutagenesis. Mutants have been designed in order to fill the cavities at the planar interface of the antibody-antigen combining site, or to modify the salt-bridge interactions. The antibody fragment coding regions were then transferred to a high-level expression vector such as pPOW...

Cassette mutagenesis. In this method, a fragment of DNA is synthesized, and then inserted into a plasmid. It involves the cleavage by a restriction enzyme at a site in the plasmid and subsequent ligation of a pair of complementary oligonucleotides containing the mutation in the gene of interest to the plasmid.

Four amino acid substitutions (S92A, D93G, D174A and S187F) were introduced into the enzyme by site-directed mutagenesis and the enzymes were produced in *Pichia pastoris* KM71.

Plant Mutation Breeding and Biotechnology

Mutagenesis (molecular biology technique) Mutagenesis in the laboratory is an important technique whereby DNA mutations are deliberately engineered to produce mutant genes, proteins, strains of bacteria, or other genetically modified organisms. Various constituents of a gene, such as its control elements and its gene product,...

Mutagenesis (molecular biology technique) - Wikipedia

Mutagenesis assays assess the effect of a biomaterial on a cell's genetic material. There are a wide range of mechanisms by which a material can affect a cell's genes. Genotoxic mutagens directly alter cell DNA through various types of mutations. Each chemical may be associated with a specific type of DNA mutation.
