A taxis (plural taxes / ˈtæksɪz /, from Ancient Greek taxis, meaning 'arrangement') is the movement of an organism in response to a stimulus such as light or the presence of food. Taxes are innate behavioural responses. A taxis differs from a tropism (turning response, often growth towards or away from a stimulus) in that in the case of taxis, the organism has motility ...

Life on earth has adapted to the day-night cycle by evolution of internal, so-called circadian clocks that adjust behavior and physiology to the recurring changes in environmental conditions. In mammals, a master pacemaker located in the suprachiasmatic nucleus (SCN) of the hypothalamus receives environmental light information and synchronizes peripheral tissues and central non-SCN clocks to ...

Abstract. The tuberal nucleus (TN) is a surprisingly understudied brain region. We found that somatostatin (SST) neurons in the TN, which is known to exhibit pathological or cytological changes in human neurodegenerative diseases, play a crucial role in regulating feeding in mice.

### **Regulation of feeding by somatostatin neurons in the**

With regards to academic rumblings about deep learning, in 2017 there was a new cottage industry in attacking deep learning by constructing fake images for which a deep learning network gave high scores for ridiculous interpretations.

A few recent comprehensive reviews (Brinkmann and Kontermann, 2017, Kontermann and Brinkmann, 2015, Spiess et al., 2015) have summarized the various bispecific antibody designs currently under development or approved. To be consistent, this review will follow the same nomenclature they adopted whenever possible. Multiple technologies have been developed to generate human IgG-like molecules; in ...
