Memory ordering describes the order of accesses to computer memory by a CPU. The term can refer either to the memory ordering generated by the compiler during compile time, or to the memory ordering generated by a CPU during runtime.. In modern microprocessors, memory ordering characterizes the CPUs ability to reorder memory operations - it is a type of out-of-order execution.

Background and Purposeâ€”Persons with cognitive impairment, as assessed by cognitive tests, are at a higher risk of stroke. Subjective memory complaints might be an earlier marker for stroke, especially in persons with higher education. Their cognitive reserve might mask their cognitive impairment during cognitive

testing. In a population-based setting, we investigated the association between ...
