Catalogue of the Odonata of North America, by Richard A

There are more than 5000 species of Odonata world wide. In North America, there are more than 600

species, with seven families of anisoptera (dragonflies) and four families of zygoptera (damselflies) represented.

Odonates (Damselflies and Dragonflies) - SAIL Pathfinders

Fraser, F.C. (1924) A survey of the Odonata (dragonfly) fauna of western India with special remarks on the genera *Macromia* and *Idionyx* and description of thirty new species. *Records of the Indian Museum* , 26, 423-522.

***Ischnura foylei* sp. nov. (Odonata, Coenagrionidae) from**

Anisoptera are broadly distributed throughout the world. Some species of dragonfly have vast distributions such as the blue-eyed darner, *Rhinoeschna multicolor*, which is found from coast to coast in North America, in addition to Central and South America. In contrast, many families of damselflies are narrowly restricted and several families have

Dragonflies and Damselflies (Insecta: Odonata)

the order Odonata, dragonflies being the larger species in the suborder Anisoptera. Damselflies are delicate, thin bodied and less active species and are classified in the suborder Zygoptera. The word dragonfly can be applied to all Odonata so, to avoid confusion, the term odonate is

Damselflies Dragonflies (Odonata) - npws.ie

All immature Odonata have a specialized labium for catching prey. Folded under the head and thorax when not in use, the labium can be extended rapidly toward potential prey. Hooked lobes at the tip of the labium grasp or impale the prey and draw it back to the mouth as the labium retracts.
