Wounds of the heart are relatively rare. At the Medical College of Virginia Hospitals 0.1 per cent of surgical patients had such injuries, 1 and in my own experience 2 approximately 2 per cent of penetrating wounds of the chest injured the heart.

THE DIAGNOSIS AND TREATMENT OF WOUNDS OF THE HEART A

cardiac wounds and concluded [9]: "Above all my experiments seem to show that a mammalian heart will

bear a much greater amount of manipulation than has hitherto been suspected. Very large wounds of the heart can heal and the healing process occurs in a manner entirely analogous to that in other muscular tissues.â€•

Suturing of Penetrating Wounds to the Heart in the

Rinsing the wound in normal saline is best but not super convenient (2 tsp of salt to 1 liter of boiled water). Tap water is acceptable. Use water at room temperature or warmer. Immersing the hand and swishing it around in a bowl of water, or running tap water over the wound for several minutes is fine (safe irrigation pressures are 4-15 PSI).

PENETRATING WOUNDS of the chest involving the heart may allow survival for a variable period of time after injury. In those wounds that are not rapidly fatal, a fairly uniform approach has evolved in which cardiac tamponade is treated by pericardial aspiration, and shock with blood transfusion. 1-4 Failure to respond to these measures, or recurring tamponade, requires a planned thoracotomy.
